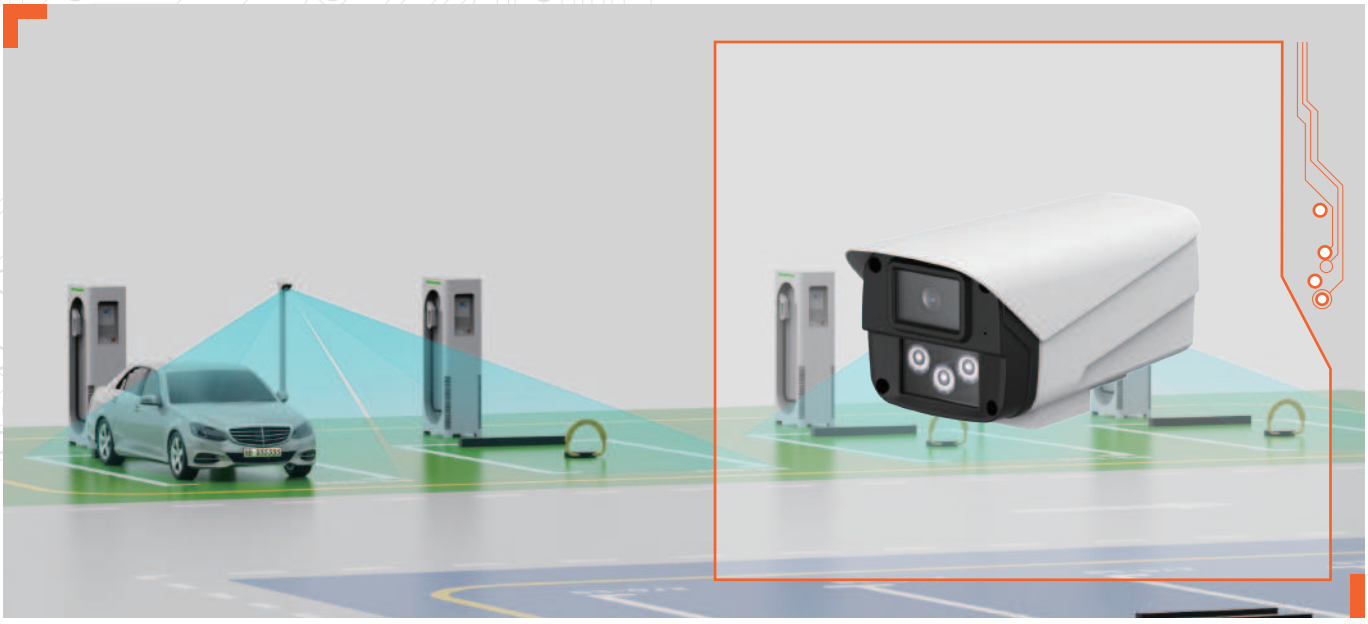
ALPR Camera for EV Charger

CCK10-V6002B-L



Highlights

- 3MP image resolution with excellent low-light performance
- Single camera supports detection of two parking space statuses
- Rich hardware interfaces for integrated control of peripheral devices
- Equipped with ICE high-precision license plate recognition algorithm, optimized for wide-angle, backlight, mixed-light plates, and harsh weather conditions (rain, snow, etc.); industry-leading recognition speed, type coverage, and accuracy
- Supports detection and output of parking space occupancy status
- Supports P2P network penetration for simplified connectivity
- Supports wide-voltage power input
- Supports remote maintenance and debugging via camera
- Supports customizable development and third-party integration
